sk1er level head mod 1.8.9 download

Autotip.

Autotip is an easy way to get experience and coins for free, automatically.

First Autotip will tip all online boosters, then tip other online Autotip users. You both send and receive tips, which will greatly increase coin and experience gain. Learn more.

Advanced Stats.

List all your experience and coins earned in each gamemode easily and specify a timeframe for more detailed earnings.

Tipping Network.

Autotip tips other online users, which creates a "network" of players tipping each other, and depending on the amount of active boosters, you can nearly double your profits. Tips received fluctuates depending on the amount of boosters online, since Autotip will prioritize boosters.

There are currently 0 players online tipping other Autotip users in 0 gamemodes.

Compact Messages.

You can either keep normal sending and receiving tip messages, make them more compact to prevent chat spam, or remove the messages entirely.

Tip History.

View everyone you've tipped in your current session, for whatever reason.

Commands.

All /autotip commands can be replaced with /at , and the | character separates the full command name and its alias. All commands are tabbable in-game.

/autotip stats|s.

Shows all coins and experience earned today.

/autotip stats [today, yesterday, week, month, year, life]

Shows all tips, coins, and experience earned in the specified timeframe.

/autotip info|?

Shows general information about the mod and your settings.

/autotip wave.

Shows when the next wave of tips will start.

/autotip messages|m.

Switch between 'tip message mode' (shown, compact, hidden)

/autotip toggle|t.

Toggle Autotip on or off.

/autotip changelog.

View the changelog of the current version.

/limbo.

Instantly puts you in Hypixel Limbo for easy AFK tipping.

Download.

Autotip will work with any Forge version supported by Hypixel, so what's to lose? Hint: nothing.

Sk1er .club.

Levelhead is built for the Hypixel server. The mod displays the Hypixel Network Level & other statistics of a player above their head, in chat and in tab.

Custom Levelhead is an optional addon that allows players to customize what appears above their own head. Click here to learn more about Custom Levelhead.

README.md.

Levelhead is a Minecraft Mod created for the Hypixel Network mc.hypixel.net to show a player's network level above their extraHead. The mod can be found in Hyperium Client.

/levelhead - Primary configuration command. Opens configuration GUI.

/levelhead dumpcache - Dumps local in ram cache for players' levels. Reloads from servers.

Levelhead: [State] - Toggle mod on and off.

Show self - Show your own level above your extraHead.

Text / Level configuration.

Text: Level - Format used for displaying level.

Modes.

Chroma - Toggles chroma. When disabled the Rotate button is available. This will rotate the color between all colors in the Minecraft Color Code system.

RGB - Use RGB for color configuration.

Standard - Use Minecraft color codes for color configuration.

Set Prefix - Allows users to specify a custom prefix instead of Level.

Due to the nature of the mod, millions of requests are sent to my server every day. As a result, heavy caching rules are in place. All levels are cached for a minimum of 2 days on Cloudflare's network. The cache time on my website is based on how many requests it is receiving. Less requests will result is shorter cache times. On average, levels are cached for 4 days on my website. When a cache update is called, the player's level is retrieved from the Hypixel Public Api and updated across Cloudflare's network.

Support the project.

You can support the project by purchasing a custom Levelhead message. More information and purchase details can be found here: https://sk1er.club/customlevelhead.

This mod tracks who uses it. General information is sent to my analytic servers. This information includes: Minecraft UUID, Minecraft Version, Mod Version and Minecraft Forge Version.

YourKit supports open source projects with innovative and intelligent tools for monitoring and profiling Java and .NET applications. YourKit is the creator of YourKit Java Profiler YourKit .NET Profiler and YourKit YouMonitor.

About.

Displays the Hypixel Network Level & other statistics of a player above their head, in chat and in tab.
